Supplemental Action

This supplemental action is being mailed to the applicant in order to correct an inadvertent typographical error under the heading "conclusion" in the previous notice of allowability, that was brought to the attention of the Examiner by the applicant on 6-4-04. The error has been corrected in this supplemental action.

Claims 1, 8, 10, 12, 14, 16, 18-20 are currently pending and are present for examination.

Applicants' amendments and arguments filed on 2-21-04, have been fully considered and are deemed to be persuasive to overcome the rejections previously applied. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. Specifically, Examiner has withdrawn all previous rejections in view of cancellation of all rejected claims by the applicants.

Priority

Applicant's claim for domestic priority under 35 U.S.C. 119(e) is acknowledged. However, the provisional application upon which priority is claimed fails to provide adequate support under 35 U.S.C. 112 for SEQ ID NO:3 of this application.

Drawings

Drawings submitted in this application are accepted by the Examiner for examination purposes only.

EXAMINER'S AMENDMENT

Please amend the specification as follows.

Please replace the paragraph on page 89, lines 1-20 with the following amended paragraph.'

--Previous genetic linkage analysis mapped the TD gene to the 7-cM region of human chromosome 9q31 (Rust et al., Nat. Genet., 20, 96-98 (1998)). In addition, *in situ* hybridization analyses revealed that the ABCI gene was localized to the broader chromosomal interval 9q22 - 9q31 (Luciani et al., Genomics, 21, 150-159 (1994)). Using PCR methods with the GeneBridge 4 panel of human/hampster radiation hybrids (Research Genetics, Inc., Huntsville, AL), human ABCI was determined to be located between the markers W1-14706 and W1-4062, corresponding to the 7-cM region of human chromosome 9q31. DNA from 93 human/hampster hybrid cell lines was amplified by PCR using human ABCI-specific primers LF: CCTCTCATTACACAAAAACCAGAC (SEQ ID NO: 11) and LR: GCTTTCTTTCACTTCTCATCCTG (SEQ ID NO: 12). Each line was scored as positive or negative for the human ABCI amplification product and the mapping of ABCI derived from analysis of this data was accomplished using the Whitehead Institute/MIT Center for Genome Research software, accessed via the internet (~~http://carbon.wi.mit.edu:8000/cgi-bin/contig/rhmapper.pl~~) (~~http://carbon.wi.mit.edu:8000/cgi-bin/contig/rhmapper.pl~~). These results were further confirmed by southern blot hybridization to human genomic/yeast artificial chromosome clones (Research Genetics, Inc.) from the equivalent interval. In addition, public database searching (GeneMap '98; National Center for Biotechnology Information) and radiation hybrid mapping eliminated the other significantly underexpressed genes in the microarray data from the location in the reported genetic interval. These complementary data demonstrate that

Art Unit: 1652

the ABC1 gene is located on human chromosome 9q31 and further indicate that the ABC1 gene is associated with Tangier disease.--

Examiner has made the above informal examiner's amendment in order to cancel the embedded hyperlink and/or other form of browser-executable code in the specification. See MPEP § 608.01.

Allowable Subject Matter

Claims 1, 8, 10, 12, 14, 16, 18-20 are allowed.

The following is an examiner's statement of reasons for allowance: Following a diligent search it was determined that the prior art neither teaches nor suggests an isolated polynucleotide having ABC1 promoter activity comprising SEQ ID NO:3 as claimed in claims 1, 8, 10, 12, 14, 16, 18-20 .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
